

MMB for Air Fresheners

Isoprene Chemical Division
Kuraray Co., Ltd.

Functions and Benefits of MMB

- Stable in formulation of Air Fresheners
- Constant and controlled diffusion / evaporation of fragrances from Air Fresheners
- Good solvent for Fragrances compatible with wide range of aroma chemicals
- Low risk of oxidation of fragrances and change in scent

Applicable types of Air Fresheners with MMB

Passive

Reed diffuser

Water based wick

Water based Gel

Active Fan

Fan and Heat ($\sim 60^{\circ}\text{C}$)

Heat ($60\sim 80^{\circ}\text{C}$)

Spray

Fan

Automotive

Plug-in

Aerosol

Pump spray

Functions of MMB in Air Fresheners by type

performance requirement	Function of MMB	Reed Diffuser	Water based wick	Water based Gel	Fan	Car	Plug-in	Pump Spray
Stabilization of Formulation	Solvent for Fragrance	✓	✓	✓	✓	✓	✓	✓
	Anti-Freeze		✓	✓				
Constant diffusion of Odor	Controlled and constant evaporation	✓	✓	✓	✓	✓	✓	
	Less effect of humidity on evaporation rate	✓						
	Less oxidation of Aroma chemicals	✓	✓	✓	✓	✓	✓	✓
	Reduce surfactant In water based formulations which causes clogging at wick		✓	✓				

Compatibility of MMB & Aroma chemicals

(in wt%)	Vanillin	Ethyl vanillin	YARA YARA	Coumarin	Rosacetol	Musk ketone	Tonalid	Menthol	Linalool	d-Limonene
MMB	36	39	12	19	11	9	45	46	∞	∞
DPG	29	27	8	14	4	2	5	42	∞	32
PG	36	15	2	8	1	1	1	42	∞	2
IPD	41	20	2	8	2	1	5	43	∞	10
DPM	35	35	17	23	16	9	40	45	∞	∞
Isopar-M	<1	<1	2	<1	1	<1	50	∞	∞	∞
Isopar-M/MMB 50/50	4	4	9	3	7	5	50	∞	∞	∞

- MMB is better in compatibility with aroma chemicals than DPG.
- MMB has less odor than DPM.

Evaporation profile-1

Vapor pressure vs Temperature of Aroma chemicals and solvents

Evaporation profile of MMB is same as that of Linalool and d-Limonene, major components of fragrances for air fresheners.

Evaporation profile-2

Evaporation of solvents at room temperature

Solvent (5.0g) in Petri dish (9cm in diameter)

At room temperature (22–23°C), humidity (37-40%)

MMB is less hygroscopic than DPM and DPG.

→ Evaporation profile of MMB system is more linear from starting point.

Evaporation profile-3

Impact of humidity on evaporation profile

Solvent (5.0g) in Petri dish (9cm in diameter)

At room temperature (22–23°C), humidity (37-40% / 27-30%)

Humidity has less impact on the evaporation profile of MMB vs DPM

Evaporation profile-4

Evaporation of MMB water solution system

MMB water solution (200ml) in Beaker (300ml) at 25°C

- Evaporation rate can be controlled by concentration of MMB
- No large change in component during the evaporation test.

Oxidation of chemicals

If the type of solvent used, is easily oxidized then oxidation of the other ingredients, Fragrance , will increase.

Oxidation of Solvents by the air

Solvent in beaker was exposed to the air at room temperature (22–23°C)
Amount of peroxides in the solvents was measured

- MMB does not increase its peroxide value while the others increase.
- MMB is stable against oxidation by the air.
- MMB base air freshener is low in risk of change in scent.

Our chemical understanding about oxidation

Type of Air Fresheners using MMB

1) Water based Wick

Stability of formulation

Appearance of water based air fresheners
With different solvents in a same formulation next page.

MMB based

DPM based

Ethanol based

1) Water based Wick

1. Formulation and Procedure					
	Name of Product	Note	(g)	Vessel having agitating function	
1)	Emulgen 108	Surfactant Kao	3.5	}	Premix of 1), 2), 3) & 4) is chaged to the vessel
2)	PELEX OT-P	Surfactant Kao	3.0		
3)	Solvent	Solvent Kuraray	3.0		
4)	Deionized Water	Deionized Water	5.0		
5)	Rose JT10374	Fragrance Symrise	1.5	→	
6)	Denicide EF	Antiseptics Nagase Chemtech	0.1	→	
7)	Deionized Water	Deionized Water	20.0	→	Charge dropwise with vigorous agitation for 30min at r.t.
8)			36.1		Mixture Liquid A
				Vessel having agitating function	
9)	Deionized Water	Deionized Water	63.8	→	
10)	Mixture Liquid A		36.1	→	Charge dropwise with vigorous agitation for 30min at r.t.
11)	Dye	Colorant	0.1	→	
12)	Total		100.0		

2) Pump spray

Particle size

Particle size of two spays, with & without MMB, was checked.

Sample A (no MMB)

Sample B (MMB)

- Finer particles with MMB system
- No white spots (surfactants) on hard surface after spaying

	A	B
water (wt%)	40	4
MMB (wt%)	0	30
EtOH (wt%)	38	50
Surfactant(wt%)	5 ~ 8	0%
others (wt%)	3 ~ 5	16

Tested on thermal paper

3) Reed Diffuser

Evaporation profile of MMB system vs DPM system

● MMB system : MMB(80%)、Fragrance(20%)

● DPM system : DPM(80%)、Fragrance(20%)

Conditions of the test : Liquid (25g) in a bottle(110ml) with 5 reeds (25cm in length)
At room temperature(17-25°C)

100% of evaporation

Evaporation stopped at 80% of the total !
